Test Case	Expected result	Result	Remarks/suggestion
User click on login button	<p>User will see the Administrator login page, when type wrong username or password they will show wrong user name password combination.</p> <p>When user login issues, he/ she will see 3 functions inside, the first function is added now recipe.</p> <p>Second is Upload image, Recipe Overview.</p> <p>When click add now recipe will show out info of recipe input, inside have 6 type information want to fill in, and click submit. I need go to recipe page then it will show at the last. But before this must upload recipe image then show at the add now recipe image.</p>	Pass	

When user type Wrong user or password

The image shows a web form titled "Administrator Login". It features a header with the title in a brown box. Below the header, there is a light red error message box that says "Wrong username/password combination". Underneath the error message, there are two input fields: "Username" and "Password". At the bottom of the form is a brown "Login" button. A mouse cursor is visible over the error message box.
